1 Searching the Typeset Text

The Ternlatex viewer finds words across the *whole* document, including efficient ligatures, the naïve café and a deliberately long paragraph that keeps going so that TeX has to break it over several lines and perhaps hyphenate an extraordinarily lengthy word such as electroencephalographically or incomprehensibilities somewhere near the margin of the page. Hyphenation should not stop a search for incomprehensibilities from finding it.

1.1 Chapter File

Text from an input file mentions narwhals and **bold** ideas.

$$\text{energy} = mc^2 \tag{1}$$

As shown in Equation 1, energy is conserved [**?**].

| Quokka | 42 |

Second page talks about the quokka again, and about mountain gorillas.
